

Course: Monitoring Your Water System

Water system monitoring is an essential part of ensuring you are providing water that is safe to drink. Monitoring helps to ensure you have good quality source water and your treatment system is working properly.

The course will cover:

- Why water systems need to be monitored.
- What a water quality monitoring plan is and what goes in it.
- The common parameters of interest in source water and finished water.
- The components commonly found in small water systems and how they should be monitored.
- Where and how frequently, parameters should be monitored.
- Procedure to collect bacteriological samples.

Date: December 4, 2018
