

DRUG ALERT

Nelson

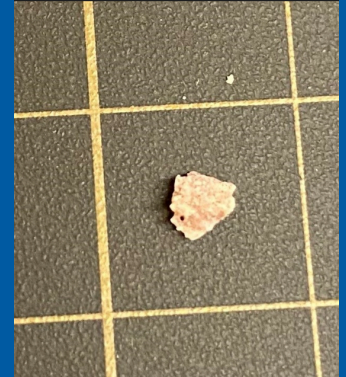

DOWN contains fluorofentanyl, ketamine and benzodiazepine

Looks Like: Pink Chunks, Powder, Pebbles

Sold as: Down, Dope, Fentanyl

Contains: Fluorofentanyl
Ketamine
Benzodiazepine (unspecified)

Risk: High risk of overdose and fatal overdose
Dizziness, dissociation and confusion
Nausea, amnesia, sleepiness, nodding out for a long time
Smoking is not safer than injecting

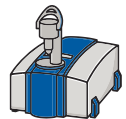

Ketamine is a dissociative anesthetic. In higher doses, it can cause immobilization, loss of body control, dizziness and hallucinations.

The combination of fluorofentanyl, ketamine and benzodiazepines can lead to significant sedation. Overdose symptoms may last beyond administration of naloxone.

If you have a drug that looks like this, get it tested before using. Drug checking is available at ANKORS in Nelson. Call or text 236-972-7080 for more information.

Consider these additional tips if you are going to use drugs

- Find more drug checking locations at www.drugchecking.ca
- Be aware of risks if mixing with other drugs, including alcohol
- Use with others around or at an Overdose Prevention Site
- Start with a small amount and wait before taking more
- Space out your doses
- Carry naloxone and know how to use it
- Call 211 or visit bc211.ca to find services near you
- Get the LifeGuard App - lifeguardddh.com

Alert in effect until July 9th 2025
