

What is ECHO?

Extension for Community Health Outcomes (ECHO) is a tele-mentoring program designed to create a virtual Community of Practice. ECHO brings together health-care providers and subject matter experts using videoconference technology. ECHO sessions include a brief accredited lecture presentation, case presentation, case discussion and treatment and resource recommendations from the group, fostering an “all learn, all teach” approach. If you have any questions, please feel free to reach out via email: echo@interiorhealth.ca.

What are you interested in learning about next?

We are always looking for ideas to consider for future ECHO sessions. We would love to hear from you! Please [use this link](#) to submit your topic suggestions.
